

APPLICANT: David Rowley, et al.  
SERIAL NO.: 10/060,345  
DOCKET NO.: 23415-012  
CUSTOMER NO.: 29315

**IN THE SPECIFICATION:**

On page 1, please replace the third full paragraph with the following amended paragraph:

Conventional information technology (IT) classrooms include several computers (also referred to as "machines"), with each computer possibly running a different operating system.

The reason a typical IT classroom is set up in this way is that several machines are required in order for a student to complete a classroom exercise. For example, a typical classroom exercise may require the student to perform one task on a machine running one operating system (e.g., UNIX) and perform another task on a machine running a different operating system (e.g., an operating system from Microsoft).
